

EQUITY AND POLICY IN DISASTER PLANNING

Zahrah Nesbitt-Ahmed | Research Lead

SGS Advocacy in Aging Virtual Forum | 18 October 2023

1.

Climate change Widespread, rapid and intensifying. - IPCC, 2021

Globally, impacts of climate-related disasters are becoming increasingly frequent and intense, reflected in both sudden-onset events (e.g., droughts, floods and wildfires) and slow-onset ones (e.g., rising temperatures, rising sea levels, changing rainfall patterns and desertification).

2.

Manifestations of vulnerability to climate-related disaster are likely to vary for different groups of people.

Increasing recognition that climate-related impacts are “nuanced, often unexpected, and depend on the type of shock and the local context” (Kristjanson et al., 2017:485), with gendered differences between girls, boys, women and men.

3.

In an era of heightened climate risk, growing interest in linking Disaster Risk Finance (DRF) instruments with adaptive/shock-responsive social protection.

FINANCING DISASTER RESPONSE

1.3 %

(USD\$ 923 million)

of the total official crisis financing of USD\$ 71 billion was pre-arranged (in 2021)

PLANNING BETTER

- In an era of heightened climate risk, growing interest in linking Disaster Risk Finance (DRF) instruments with adaptive/shock-responsive social protection.

4.

If we care about protecting historically marginalized people and communities from disasters, EQUITY MATTERS.

THANK YOU
